

### Notes:

1. The supply voltage should be a maximum of 5.2V and a minimum of 2.0V. Pin 8 of the chip is the power input.
2. If using a lithium battery for power supply, connect the power directly to Pin 8 (VBAT).
3. For downloading voice, connect Pin 2 to the RX pin of a USB-to-TTL converter.

Power Supply Voltage [2.0V~3.5V]: VBAT and VDDIO should be shorted.

Power Supply Voltage [3.5V~5V]: VBAT and VDDIO must be connected separately.
